

PROFESSIONAL INTELLIGENCE WITH EVIDENCE

Ask AI: evidence over spectacle

A professional knowledge interface that answers from curated content, preserves citations, and remains useful when an LLM provider is unavailable.

CANONICAL CITATIONS ES / EN RAG DETERMINISTIC FALLBACK

KNOWLEDGE INTERFACE

An answer is valuable when it can be traced.

Ask AI connects the question, editorial corpus, retrieval, configurable provider, and public citations within one operational flow.

01 A conversation connected to sources

The experience answers concrete professional questions without turning a model inference into a fact.

Ask AI · professional context

VERIFIED EXECUTION

QUESTION

What evidence demonstrates experience with applied AI and RAG?

ANSWER

The evidence combines AI and RAG tools for career workflows, SEO, and structured content with a CMS platform that prepares traceable knowledge for retrieval and assisted answers.

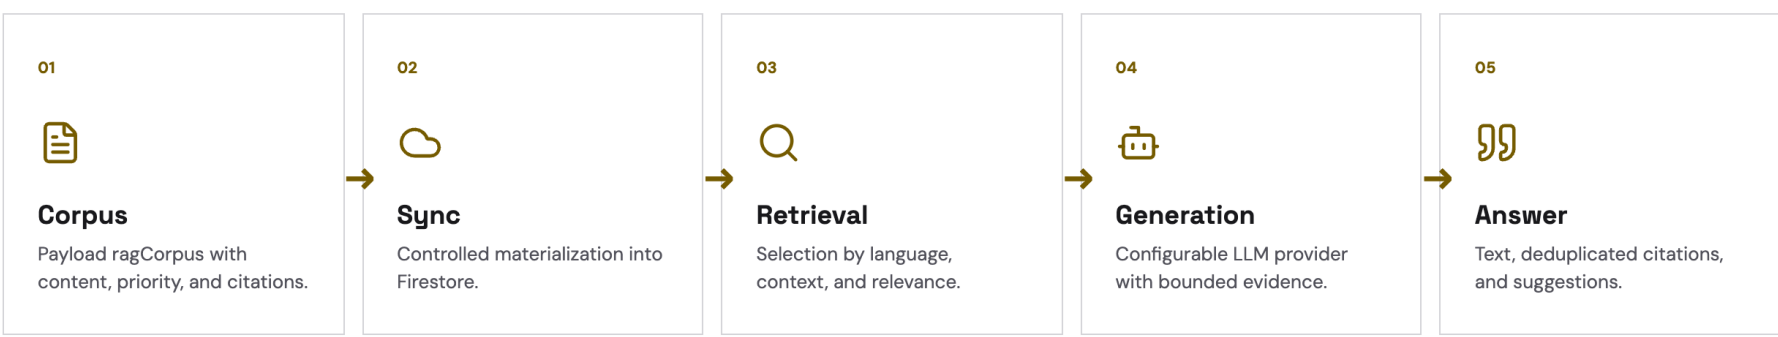

The work includes reusable contracts, an editorial corpus, operational synchronization, citations, and usage controls.

CASE - ABOUT ME PLATFORM

PROFESSIONAL TIMELINE

02 Editorial RAG pipeline

Payload preserves the source of truth; Firestore materializes the corpus; the runtime retrieves evidence by language and context.

03 Trust and control

Quality depends on more than the prompt: it also requires contracts, usage limits, traceability, and predictable degradation.

Canonical citations

Recognized projects, public URLs, and source deduplication.

Cache and history

Firestore when available; memory and JSONL as local fallbacks.

Rate limit and budget

Configurable windows and provider usage protection.

Deterministic fallback

The interface remains useful even without an LLM key.

04 A platform capability

The shared package separates UI, transport, retrieval, and providers so Ask AI does not become an isolated demo.

	Interface	Reusable panel for questions, answers, states, and citations.	AskAIPanel
	HTTP contract	Endpoint and web adapter with a stable response shape.	/api/ask-ai
	RAG service	Retrieval, cache, controls, and context construction.	@aboutme/ai
	Providers	Gemini, GitHub Models, Cerebras, and NVIDIA NIM.	CONFIGURABLE

CAPABILITY	STATUS	ACCURATE READING
Endpoint, contracts, fallback, and citations	AVAILABLE	A product-owned capability.
LLM, Firestore, and synchronized corpus	BY ENVIRONMENT	Depend on configuration and credentials.
Greater event-driven automation	EVOLUTION	Not presented as delivered.

OUTCOME

Applied AI as a system: structured content, retrieval, evidence, and operations.
